ACKNOWLEDGEMENT

I would like to express my sincere gratitude towards the Computer Science Department of Bhavan's College.

After months of hard work, finally I am delighted to present my project. The Project making was full of new experiences, learning and difficult one too.

Though a difficult job it was made simpler by the timely guidance received, which helped me greatly in the completion of my project. But it wouldn't be right to do so without thanking to those who have helped me in converting our thought into reality. So I would like to take full advantage of this opportunity to thank each and every person who has helped me throughout the completion of our project.

I am obliged to my parents & family members who always support me greatly and encouraged me in each and every step. I give my special thanks and sincere gratitude towards the Principal Dr. Zarin Bathena , Head of SFC Prof.[name] and Head of Department(Computer Science) Prof. Mrs. Krupa Balsara Kamdar. I owe my sincere thanks to our Project guide Prof Ms. Nancy Nelson for their constant support and encouragement without which the successful completion of this project would have been impossible. They have been instrumental for making me concentrate and focus my effort in this project. And last but not the least the entire college staff.

I would like to give thanks to my client Mr. Santosh Gupta for helping me in my project. Finally I would like to thank each and every individual who directly or indirectly contributing for this project.

Thank-you

1. Preliminary Investigation

1.1 Organizational Overview:

YASH AUTOMOBILES

- The name of the showroom is “Yash Automobiles”. The address of the showroom is Koldongri, Andheri (East).
- It was started by the owner of the showroom Mr. Santosh Gupta in the year 2003.
- It deals with multibrands. Honda, Baja, Yamaha, TVS and many more.
- You get to choose out of the best just under one roof.

1.2 Description of the existing system:

- The current system doesn't provide a convenient medium of communication for the clients to interact and help get the information at ease. The records are manually entered and fetching data is time consuming tedious.

1.3 Limitation of the present system:

- The present system doesn't offer any online facilities to clients.
- The clients have to keep a check if the servicing of their vehicle is done or not.
- The data entry is manual making it a task to fetch the data.
- The details of the vehicles and other information can be known by visiting the showroom.
- The questions and doubts are solved on calls.

1.4 The proposed system:

- The new system will help store the records under one place providing flexibility in managing the data.
- The website will have a provide a medium for the clients to interact better and ask questions.
- The clients will be able to add feedback.
- The servicing can be booked online.
- Information about the vehicles will be updated on the website.
- The clients can also book servicing on the website.

1.5 Number Of Module:

- Login module: There are three login i.e for admin, user and staff.
- Admin login: Admin can view, delete and add staff. Admin can also view feedback and the lined-up appointments for services as well as the bookings.
- Customer/User login: The customer will login n then will be redirected to a new page where they can view the services available and book accordingly. IF they want to book a vehicle the can select it from the various brands on the website.
- Staff login: The staff which already added by the admin can login and check the services and feedback.
- Feedback module: Here the customers can add their feedback after completion of their services.
- Book service: Here the customer will choose services and once they book the selected service they will get a receipt for it.
- The proposed system implements to make the task of user admin and staff hassle free and get things at the touch of one click.

1.6 Proposed system:

- The new system will be computerized making work faster and more efficient.
- The system will provide facility of data entry related to staff details, payments, vehicle details, service details helping to manage all records under one place.
- The clients can ask questions on the website providing a better platform of communication.
- The clients can also add feedback on the website which will help the business grow better.
- The clients can wish list the vehicles they like.
- Through website the clients can get overall information, pricing, images of the vehicle they desire at the touch of one click.
- The website will also allow the clients to give their vehicle for servicing and a detailed report at the end.

1.7 Technology used:

- **Front End**
Bootstrap
- **Back End**
Python Django

Software Requirements

- a) Windows 7, 8, 10 or 11 with 32-bit or 64-bit architecture.
- b) Microsoft Office
- c) Google Chrome or Mozilla Firefox (Any web browser)

Hardware Requirements

- a) 2 GB RAM or more
- b) 1.6 GHz or fast processor
- c) Intel i3 or more

Feasibility study:**• Technical Feasibility**

The technical issues usually raised during the feasibility stage of the investigation includes the following

- a) Does the necessary technology exist to do what is suggested?
- b) Do the proposed equipment have the technical capacity to hold the data required to use the new system?
- c) Will the proposed system provide adequate response to inquiries, regardless of the number or location of users?

• Operational Feasibility

The proposed system will automate the existing manual system and make it user friendly. With the required training the user will find the system easier to operate. The system cuts down the time delay of the existing manual system.

• Economic Feasibility

- The proposed system must be justifiable in terms of cost and benefit, to ensure that the investment in a new/changed system provides a reasonable return.
- Is the system cost effective?
Yes, the proposed system is time efficient and cost effective and will reduce human errors. It will save the organisation extra labour work.
- What is the cost of the hardware required?
The organisation already has the software and hardware needed to implement the proposed system. Hence, the cost is zero in this system.

• Resource Feasibility

- A resource feasibility test was conducted to check the following things:
 - a) Availability of manpower.
 - b) The necessary skills and support on behalf of the staff.
 - c) Availability of necessary infrastructure.
- The test produced the following results
 - a) Each and every function is well defined.
 - b) System has a very user-friendly environment.
 - c) Role of each user is very well defined.

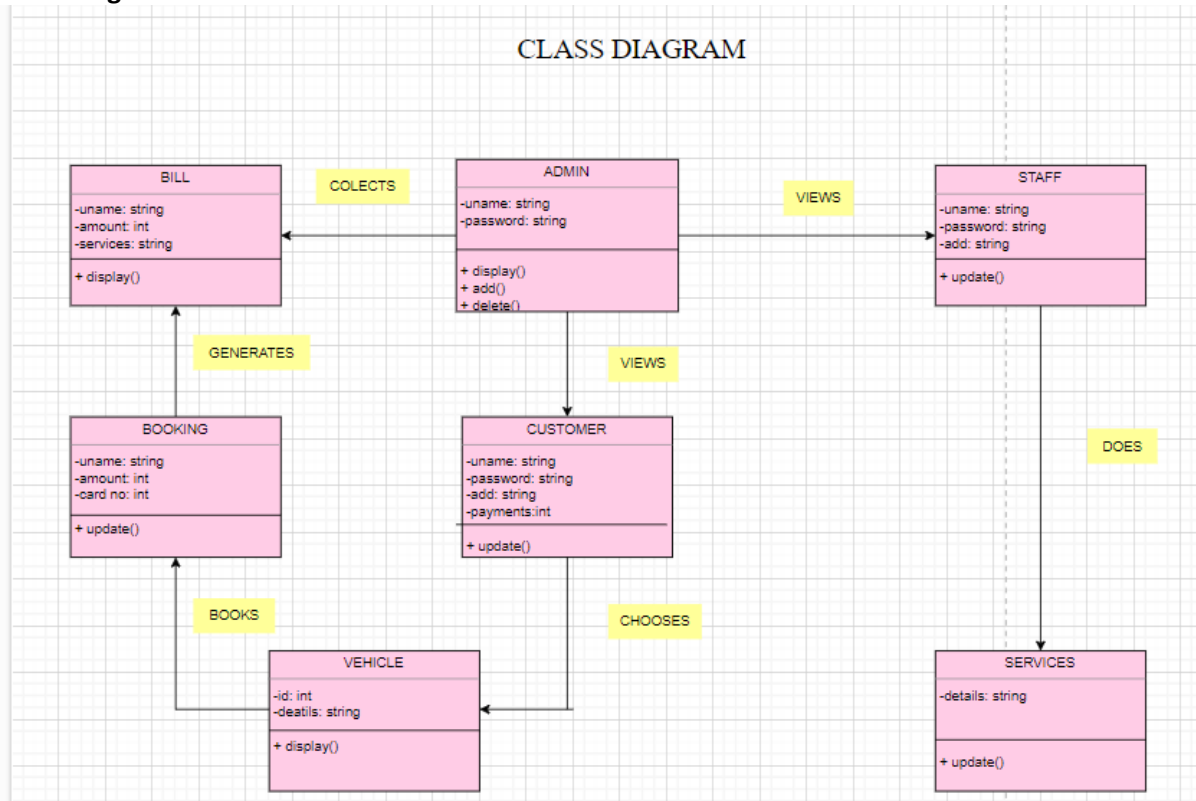

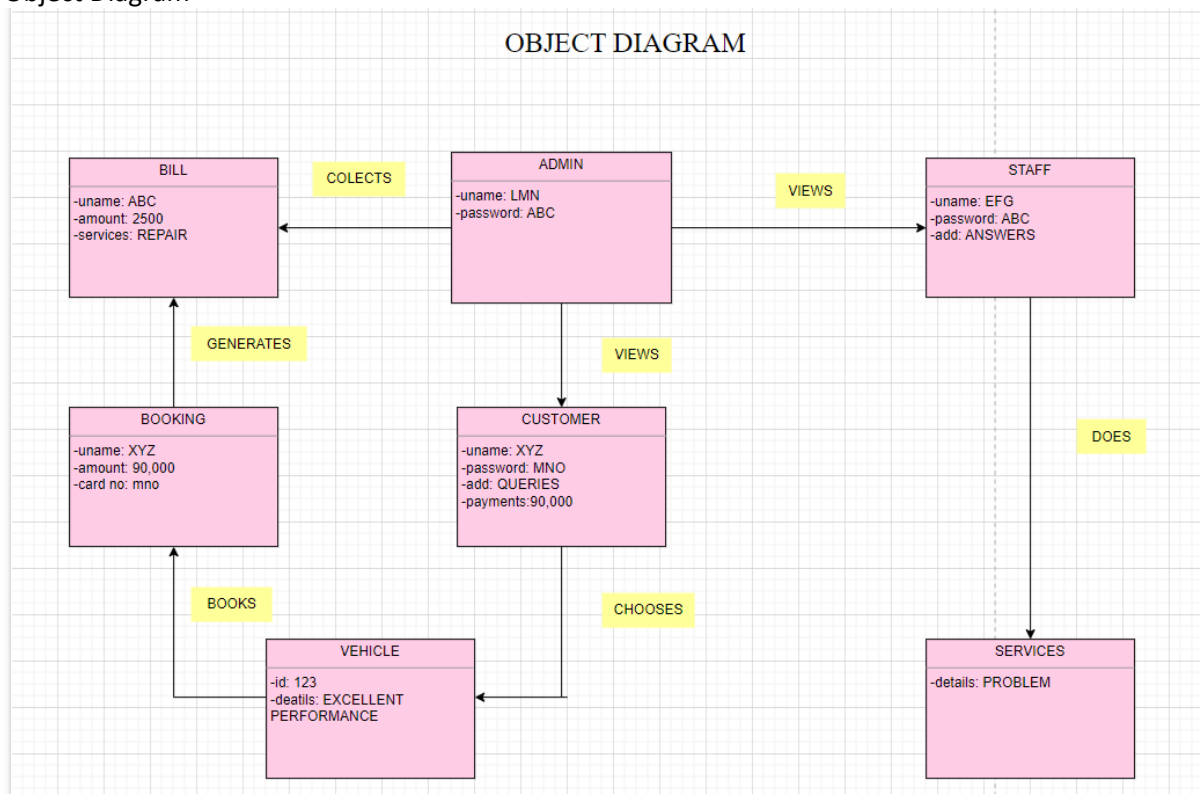

2. System Analysis

2.1 Fact Finding Technique**Questioner:**

- 1) What is the main goal behind building the website?
- 2) What features are must in your website?
- 3) Do you have a style guide?
- 4) How Would You Describe Your Project?
- 5) Will You Need Specific Information or Advice?
- 6) Will You Need to Use Special Tools or Templates?
- 7) How Might Your Project Evolve over Time?
- 8) Is There a Deadline?
- 9) What is your budget?
- 10]What is your personal passion about this project? What will this mean to you when we succeed?

Future Enhancement

- At the moment a user doesn't have an option for online payment, I will try to implement online transactions in future.
- In future, I'll try to add videos and 360 degree view for better perception.

Conclusion

- Client's biggest requirement was to have a convenient way of customer interaction.
- The reach will also be increased as the new customers can view the feedback and enjoy the services provided.
- All the staff records, the services booked time booked, the vehicles booked can be checked by the admin at one place.
- Manual task has been reduced.
- This project has been successful in fulfilling the needs of the client.
